additional consulting from  
Muaz Abdul-Halim

Secret Garden is a wall installation that uses plastic flowers and bird song. The wall will be filled from top to bottom and side to side with flowers. Photo sensors embedded in the flowers will trigger several different bird songs in a random sequence. Additionally, I hope to figure out how to create a light effect that simulates sunrise, so as person approaches the wall the light will intensify.

The wall itself will be a false wall built of 2" insulating foam to the exact dimensions of the existing back wall. Our wall will be set several inches from the existing wall to accommodate whatever electronic gear we use. We will probably create a "door" in the wall to allow easy access to the electronics.
